NASAL DILATORS (7/25)

Introduction

The nostril region of the nose is a frequent site of nasal obstruction in patients. This nasal valve region and its surrounding area can be compromised by many changes including:

- Septal deviation
- Common cold, hayfever, nasal allergy
- Scarring from burns, surgery or trauma
- Bell's palsy or stroke
- Aging of the nasal skin and cartilages
- Cosmetic nasal surgery.

There are surgical procedures that can correct these problems. Alternatively there are many mechanical therapeutic devices on the market, which may be beneficial.

Breathe Right® External Nasal Dilator

Available at most pharmacies, approximately \$7.00 for a box of 10
800-858-6673

Breathe EZ™

Stainless steel alloy wire formed as a looped spring, which is flexible, collapsible and self expanding (available in small, medium and large), \$14 per pair
718-498-1686, 718-385-3294 (fax)
